

TURN THREATS INTO **TARGETS**

FROM DETECTION TO ACTION, Saab develops and delivers complete GBAD networks. Working in partnerships around the world, we transfer technology and skills to build valuable economic growth.

BAMSE is a uniquely unjammable, all-weather, Automatic Command to Line-of-Sight missile system. Its firing units are effectively co-ordinated by the GIRAFFE AMB surveillance radar and C4I function, which can also co-ordinate and command networks of other GBAD systems, such as RBS 70 MANPADS.

With a basic configuration of three firing units, the BAMSE system has ground coverage of more than 1,500 km² and effective altitude coverage of 15,000 m. The systems work together to locate, track and destroy any aerial threat, from small, high velocity anti-radiation missiles to large, low-speed bomber aircraft. ●●●●●

ROLE	DEDICATED GBAD NETWORK
BENEFIT	HIGH PRECISION
STRENGTH	ALL-TARGET CAPABILITY
